

BlueCube Watermaker makes its Middle East debut at the Dubai Pre-Owned Boat Show

Dubai, November 4, 2010

The *BlueCube* watermaker made its Middle East debut at the Pre-Owned Boat Show in Dubai held at the Dubai Creek Marina this weekend. It was on display at the ***Dynamic Energy & Water Solutions*** stand throughout the 3 days of the show.

BlueCube, a compact, lightweight reverse-osmosis (R.O.) desalination unit, is designed and built by **H2O Inc.** in Lafayette, Louisiana (U.S.A.), and is intended mainly for use on marine vessels – luxury yachts, cruise ships, supply boats, work barges – as well as in other applications where space is limited or weight comes at a premium and high-purity potable water is needed.

BlueCubes are easy to install, operate, and maintain. They are self-contained and equipped with the necessary solid-state electronic controls to automatically monitor and display key operating parameters for safe, virtually unattended operation and minimal human intervention.

The *BlueCube* comes in a wide range of capacities from 200 to 45,000 GPD (U.S. Gal./Day), or 750 to 170,000 Lit./Day, to provide high-quality fresh water meeting strict international and maritime standards. It can also be adapted for land-based application on islands or remote areas where a fresh water supply is not readily available. A 500 GPD unit equipped with the *CruiseControl™* option was on display at the DEWS stand at the boat show and will continue to be available for viewing in the U.A.E. by prior arrangement.
